When we interact with others, the context in which our actions take place plays a major role in our behavior. This means that our understanding of objects, words, emotions, and social cues may differ depending on where we encounter them. Here, we explain how context affects daily mental processes, ranging from how people see things to how they behave with others.

Early theories assumed that personality was expressed in people's physical appearance. One early approach, developed by the German physician Franz Joseph Gall (1758-1828) and known as phrenology, was based on the idea that we could measure personality by assessing the patterns of bumps on people's skulls (Figure 11.1 "Phrenology"). In the Victorian age, phrenology was taken seriously ...
